Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Access & Enter Details	Stage 2 : Crop Recommendation	Stage 3 : Decision & Follow-up
Actions <i>What does the customer do?</i>	• Opens the OptiCrop web application. • Enters soil and environmental parameters (N, P, K, temperature, humidity, pH, rainfall). • Clicks the Predict button.	• Waits for the machine learning model to process the inputs. • Views the recommended crop. • Reviews the prediction result before making a decision.	• Selects the recommended crop for cultivation. • Applies the recommendation in farming. • Returns to the application for future crop predictions.
Touchpoint <i>What part of the service do they interact with?</i>	• Flask web interface. • Input form. • Browser and responsive UI.	• Prediction engine • Machine learning model (.pkl) • Results page	• Recommendation output. • Web application dashboard. • Customer support or documentation (if available).
Customer Thought <i>What is the customer thinking?</i>	• "Is this application easy to use?" • "Will the recommendation be accurate?" • "Have I entered the correct values?"	• "I hope the recommended crop suits my land." • "How reliable is this prediction?" • "Can this improve my crop yield?"	• "This recommendation should help improve my productivity." • "I will use this application again." • "I can recommend this tool to other farmers."

Customer Feeling <i>What is the customer feeling?</i>	• Curious • Interested • Hopeful	• Confident • Excited • Reassured	• Satisfied • Trusting • Motivated
Process Ownership <i>Who is in the lead on this?</i>	• Frontend Development Team • UI/UX Designer • Input Validation Module	• Machine Learning Module • Flask Backend • Prediction engine	• Recommendation System • System Maintenance Team • Database & Support Team
Opportunities <i>How can we improve this stage?</i>	• Simplify the input form. • Add tooltips explaining each agricultural parameter. • Support multiple languages for farmers.	• Improve prediction accuracy using larger datasets. • Display confidence scores and alternative crop recommendations. • Reduce prediction response time.	• Collect user feedback to improve the model. • Provide fertilizer and irrigation recommendations. • Add weather forecasting and market price integration for better farming decisions.
